| TITLE:    IDMS Security Class Codes                                         |
|                                                                             |
|_____|
```

```
 _____
| Purpose |
|_____|
```
To establish procedures for the use of IDMS-DC/UCF Security class codes.

```
 _____
| Definitions  |
|_____|
```
Security class code - a field in the user id that is used in conjunction with the security class(es) defined in the TASK and PROGRAM statements to determine if the user can execute a specific task or program. In order for a user to execute a task or program, the user's security must contain the security class associated within the task or program.

```
 _____
| Procedure    |
|_____|
```
Authorization to use a security class must be obtained by:

    1. Department completing a User Id Request form (see attachment).
       a. Appropriate security class must be chosen according to
           Department list. (See Security Class Code List).

    2. Send form to the Database Section.

The Database Section will complete the necessary steps to ensure that the appropriate user id's are authorized for the security code requested and notify the user when everything is completed.
Code List

```
 _____
| Security Class Code List         |
|_____|
